DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group II in Paper No. 12 is acknowledged. The traversal is on the ground(s) that the groups are interrelated. Upon further examination, this is found persuasive. Claims 1-21 have been rejoined.

Priority

2. If applicant desires priority under 35 U.S.C. 120 based upon a previously filed application, specific reference to the earlier filed application must be made in the instant application. For benefit claims under 35 U.S.C. 120, 121 or 365(c), the reference must include the relationship (i.e., continuation, divisional, or continuation-in-part) of the applications. This should appear as the first sentence of the specification following the title, preferably as a separate paragraph unless it appears in an application data sheet. The status of nonprovisional parent application(s) (whether patented or abandoned) should also be included. If a parent application has become a patent, the expression "now Patent No.

______" should follow the filing date of the parent application. If a parent application has become abandoned, the expression "now abandoned" should follow the filing date of the parent application.

If the application is a utility or plant application filed under 35 U.S.C. 111(a) on or after November 29, 2000, the specific reference must be submitted during the pendency of the application and within the later of four months from the actual filing date of the application or

Application/Control Number: 09/767,764

Art Unit: 1637

sixteen months from the filing date of the prior application. If the application is a utility or plant application which entered the national stage from an international application filed on or after November 29, 2000, after compliance with 35 U.S.C. 371, the specific reference must be submitted during the pendency of the application and within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371(b) or (f) or sixteen months from the filing date of the prior application. See 37 CFR 1.78(a)(2)(ii) and (a)(5)(ii). This time period is not extendable and a failure to submit the reference required by 35 U.S.C. 119(e) and/or 120, where applicable, within this time period is considered a waiver of any benefit of such prior application(s) under 35 U.S.C. 119(e), 120, 121 and 365(c). A priority claim filed after the required time period may be accepted if it is accompanied by a grantable petition to accept an unintentionally delayed claim for priority under 35 U.S.C. 119(e), 120, 121 and 365(c). The petition must be accompanied by (1) the reference required by 35 U.S.C. 120 or 119(e) and 37 CFR 1.78(a)(2) or (a)(5) to the prior application (unless previously submitted), (2) a surcharge under 37 CFR 1.17(t), and (3) a statement that the entire delay between the date the claim was due under 37 CFR 1.78(a)(2) or (a)(5) and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional. The petition should be addressed to: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6,8-13,17-20 rejected under 35 U.S.C. 102(b) as being anticipated by Chetverin et al (US5,616,478 April 1, 1997).

Chetverin et al teach a method of immobilizing nucleic acid which is then amplified and then used in a cell free system translated (see whole doc. esp. abstract). They teach that the amplification produces colonies (see col. 5 line 61). They teach the use of acrylamide (see col.12 line 50). The teach various cell free translation systems (see col. 14 line22-35). They teach detection of amplified products using labeled probes (see col. 19 lne61

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various

claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-5,7-12,17 & 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keller et al (US5,656,462 Aug. 12, 1997) in view of Hecht ((US5,571,690 Nov. 5, 1996).

Keller et al teach a method of nucleotide immobilized support including a insoluble support and polynucleotide bound to the support to synthesis of both cDNA and mRNA(see whole document esp. abstract). They also teach the use of incorporation of Ty promoters and coding regions so the resultant immobilized amplicons are used in transcription methodologies (see col. 51 ine 38). They also teach the eventual use of the mRNAs into protein (see col. 1 line 11).

Keller et al do not teach translation.

Hecht teach cell free synthesis of proteins suing in vitro translation systems that would be perfectly applicable to any transcription system (see whole doc & col. 5 lines 25-54)

One of ordinary skill in the art would have been motivated to apply Hecht's cell free translation system to Keller et al's transcription method in order to reliably produce protiensa high quantity of protein. Hecht states that their method produces large quantities of protein reliably (see col.3 line 66 & abstract). It would have been prima facie obvious to apply Hecht's translation system to Keller et al's immobilized transcription method in order to produce large quantities of protein.

Application/Control Number: 09/767,764 Page 6

Art Unit: 1637

5. Claims 14-16 & 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Chetverin et al (US5,616,478 April 1, 1997) in view of Summerton et al (US6,060246 May 9,

2000).

The teachings of Chetverin et al are described previously.

Chetverin et al do not explicitly teach 30 cycles or fluorescence detection.

Summerton et al teach PCR amplification of 30 cycles and fluorescence detection of

amplified product (see col. 21 line 46-53).

One of ordinary skill in the art would have been motivated to apply Summerton et al's

teachings of 30 cycles and fluorescence detection to Chetverin et al's PCR technique in order to

successfully amplify product. At the time the invention was made, it was well known and

commonly practiced in the PCR art to increase the cycle number to exponentially increase the

amplification product and to use fluorescence to detect products. It would have been prima facie

obvious to apply Summerton et al's cycle number and fluorescence detection to Chetverin et al's

PCR method in order to produce large quantities of product for detection.

SUMMARY

6. No claims allowed. Chrisey et al (WO01/46471) is enclosed as post art reference of

interest.

Application/Control Number: 09/767,764

Art Unit: 1637

CONCLUSION

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey Siew whose telephone number is (703) 305-3886 and whose e-mail address is Jeffrey.Siew@uspto.gov. However, the office cannot guarantee security through the e-mail system nor should official papers be transmitted through this route. The examiner is on flex-time schedule and can best be reached on weekdays from 6:30 a.m. to 3 p.m. If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Gary Benzion, can be reached on (703)-308-1119.

Any inquiry of a general nature, matching or filed papers or relating to the status of this application or proceeding should be directed to the <u>Tracey Johnson</u> for Art Unit 1637 whose telephone number is (703)-305-2982.

Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The CM1 Center numbers for Group 1600 are Voice (703) 308-3290 and FAX (703)-308-4242.

JEFFREY SIEW
